EDUCATION

Georgia Institute of Technology (Atlanta, GA)

August 2019-December 2022

- Bachelor of Science in Mechanical Engineering, Minor in Robotics, GPA: 3.85
- Relevant Coursework: Engineering Materials, Engineering Graphics, Computing Techniques, Deformable Bodies, Heat Transfer, Creative Design, System Dynamics, Machine Design, Intro to AI, Robotics

WORK EXPERIENCE

Automation Engineer, Adient (Plymouth, MI)

February 2025-Present

- R&D for difficult automation processes, extending to plant install. Working as project manager and SMTE for various robotic assembly cells. Help redesign current automotive seating to be more automation friendly. Create project proposals and business cases for headcount reduction and more reliable assembly.

Robotics Engineer, SRG Global (Covington, GA)

January 2023-February 2025

- Design new robotic cells from scratch for new product launches using injection molding machines, metal stamping, FANUC robotics, PLCs and other automation devices. Create reliable processes with minimal down time for lean manufacturing methods across the company with in-house integration for other plants.

Engineering Intern, The Proud Company (Pittsburgh, PA)

June 2017-August 2019

- Served in a vital role investigating uses for new technology, including integrating advanced machine vision (Cognex), industrial and collaborative robots (ABB, Mitsubishi, Doosan), and AMRs (MiR).

PROJECTS

Automotive Seat Testing Cell

February 2025-July 2026

- Created specifications and design criteria for a fully automated seat testing cell for both manual and power seats. Focus on seat quality, reliability and overall ease of use for minimal downtime in a production environment. Creative design decisions to enable cells to hit strict JIT cycle requirements.

FANUC Clip Assembly Cell

August 2023-January 2024

- Designed, built, programmed and installed a press-side assembly cell for injection molded parts using a novel insertion feature and staying under budget and reducing head count for a 3 month payback period.

ME Capstone Project (JPL Sample Return Gripper)

August 2022-December 2022

- Worked on a team to create a robotic gripper to pick up sample tubes on Mars to be returned to Earth, prioritizing reliability and energy efficiency by creating a unique mechanical design and pickup process.

Bipedal Robotics LIDAR Lab, Georgia Institute of Technology

January 2021-May 2022

- Design and 3D modeling in SolidWorks for Cassie bipedal robot, visualization and coding with ROS and Rviz, manufacturing of parts from drawings using mills, lathes, CNC machines and other manufacturing tools.

SKILLS

Design and Manufacturing

- SolidWorks, Inventor, CATIA, NX, 3D Printing, CNC, Manual Mill, Lathe, Soldering

Programming

- FANUC TP, MATLAB, Java, Python, JavaScript, SQL, HTML, BASIC, C, AI & ML for Robotic Applications

Languages

- Japanese (intermediate level), German (beginner level)
